SMPTE to MIDI Timecode converter Turn your Mac into a Timecode Synchronizer without any additional Hardware required! Simply feed SMPTE Audio Signal into an Audio Input of your Mac, SMPTE Reader creates MIDI Timecode (MTC) of it and sends it to any MIDI Destination Port of your computer.. All in all much more hassle then the first option. The other possibility is to output the timecode to a second audio channel and then the transcriber would need a timecode reader to take that info off of the audio channel.
